Snow rail CONNECTOR for snow retention systems on standing seam roofs

Snow rail connector: PVC pipe connector with metal elongation ring.

Description

Rail connectors are used to connect snow rails

Parts

1 PVC connector w/metal ring

Packaging

25 pieces per box

Snow rail connectors are installed by inserting the connector into the snow rails, between two connecting rails. No fastening necessary. It allows and supports the expansion and the contraction of more connected pipes, so the pipe connector keeps the pipes always in the right position. It reinforces the seam and by doing so inhibits the pipe from bending and getting out of alignment.
