Snow rails for snow retention systems on standing seam roofs

Snow fence rails made of copper, stainless steel or aluminum, also painted aluminum rails available.

Description

HD snow fence rails are used for snow retention systems on roofs

Parts

10' or 20' long single rails

Packaging

10' or 20" long pallets

Stainless steel snow rails are installed by attaching the rails to the roof with REES brackets and REES heightening elements using the bolts and nuts provided with the brackets. It is recommended to contact us for engineering the amount of rails you will need to install. Please provide us distance from roof eave to roof ridge, roof slope, and seam distance to determine the correct amount of single rail snow retention you will need to install.

Installation

When working/standing on the roof and/or using a scaffold and/or a ladder etc. always make sure that you use a proper safety belt, safety harness OR OTHER appropriate safety measures to keep you safe from falling. Both Copper Exclusive and Rees and all their officers and agents will be held harmless from any claims, fees and other expenses due to claims of personal injury, death, damage to property etc, resulting from any action of the installers or affiliates.

Installation description

Stainless steel snow rails are installed by attaching the rails to the roof with REES brackets and REES heightening elements using the bolts and nuts provided with the brackets.
